There are many things we can do for our planet!

Turn off the lights!

It is easy to shut off the lights when we are not using them to save electricity, and this simple gesture could change the world. Why? because we would reduce the greenhouse effect, which is what is causing global warming! So pin on the badge for chief sentinel and start guarding the lights at home, today!

Cut out pictures from old magazines, or make your own drawings, and use them to illustrate the topics mentioned on this page.

According to NSTAR (a US utility company for electricity and natural gas), 29% of energy use in non-residential buildings is used for lighting. If you turn off the lights whenever you leave a room, you can reduce greenhouse gas emissions by 0.15 pounds per hour.

TAKE NOTE!

Oh, by the way, a computer needs about as much energy to operate as two to three incandescent bulbs. When you don't use it, turn it off!

WE CAN MAKE THE DIFFERENCE!
