

## Finding n.2

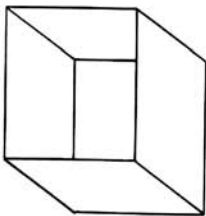

Our mind  
colours  
what we see.

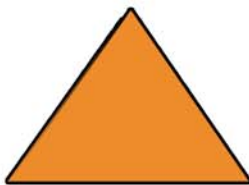

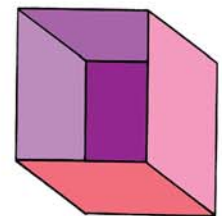

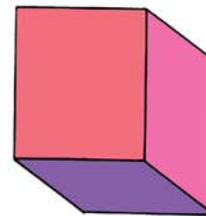

WE CAN CHANGE THINGS  
IF WE CHANGE THE WAY WE  
LOOK AT THEM!

Planet earth can be real confusing, because things are always changing! They change according to where you stand, but also to the way you look at them. Amazing, isn't it? Our desires, thoughts and emotions give shape to things. Watch out for their whims and fancies!

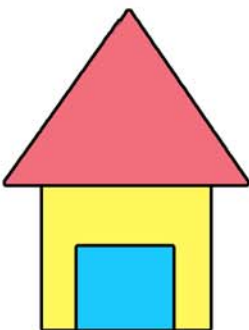

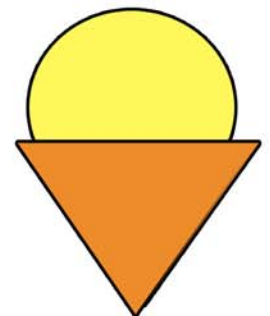

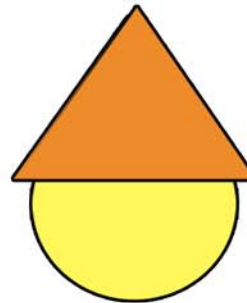

Here are some fun examples of how things change according to perspective and to the way we look at them. They remind us to be careful about always wanting the last word, because there can be other points of view that are different from ours. And different does not mean wrong! Understanding each others views becomes easier when your thoughts are rooted in human values. Human values belong to everyone and never change, no matter how you look at them!

Look at the transparent cube. Is it coming towards you, or is it an empty box? Colour the cubes on the model sheet according to how you see them.

When you look at this triangle what image comes to your mind? A hat? An ice cream cone? A roof? And what about a carrot?

What do you see? Two or one? Copy the drawing on the right, or use the template, and then ask your friends what **they** see. Later colour the drawing and bring out ... your view and opinion!
