

THE VALUE COMPASS

During his journey on planet earth Marty gets lost in the wilderness of a dark forest. How will he know which is the right path to follow? He looks around. The sky is studded with stars. One shines more brightly than the rest. How lucky! It's the North star that lost travelers follow to find direction! Now he can track his position and find his way out of the forest. But a compass would make things easier for him. The kind that points to the most radiant and sparkling values humans can think of!

WHICH ROAD IS MEANT FOR ME?

Write your name on the bottom of the cup.

Make your special compass

You need: water, a big needle, a piece of plastic, a plastic cup, a small bowl, a magnet, scissors, glue, a black marker.

Place the plastic cup upside down on top of the piece of plastic and draw the outline. Cut out the circle and write four values in place on the four cardinal points. Remember that one of these values will shine like the North Star!

Put the plastic circle in the bowl and fill it with water. Now you can magnetize your needle by putting it on the magnet for a few minutes. When the needle is ready, place it on the plastic paper circle that's in the bowl. What value is it pointing to? That's your direction!

REMEMBER TO MAGNETIZE YOUR NEEDLE!

DO YOU KNOW WHAT THE FOUR CARDINAL POINTS ARE?
